

New headquarters for the Electrical and Mechanical Services Department (EMSD) in Kai Tak

REBIRTH

With the relocation of the Hong Kong Kai Tak Airport in 1997, the Government decided to convert the former HACTL 2 (Hong Kong Air Cargo Terminal 2) building into the New Headquarters for the EMSD. Converting the building compared favorably to the cost of a new development, minimized demolition and construction waste, and saved energy consumption in the construction process. By implementing this proposal, the ex-HACTL2 building was 'reborn' to provide a more effective use.

The video showed the conversion process of demolishing part of the original building and constructing new parts.
